Quality builds trust.

Krause Imposition Manager High-End imposition solution

As no other imposition solution, the Krause Imposition Manager (KIM) has established itself through an elaborated user interface as a perfect aid inside the prepress area. A multifunctional and professional mode of operation is the result. That means a content based working within KIM also with the full integration of the JDF - (Job Definition Format) technology. The program flow in KIM is consistent with the process of sheet assembling. As a result an easy association at the highest performance can be achieved.

Krause's long-time experience in the field of imposition can be seen in KIM's extensive fold sheet library, print sheets, press marks and machine parameters. Likewise, the complete job parameters of a print product can be visually traced and changed with drag and drop. The clearly arranged and well structured graphical user interface allows short production times. As job output the Portable Document Format (PDF) can also be used as the Job Definition Format (JDF) when KIM should be integrated in a workflow system that used the JDF-Format.

- Dynamic sheet composing by using product information
- No data format change, PDF remains PDF
- Elaborated user interface
- Storage of libraries for complete marksets
- Alignment of every object to references (e.g. pages)
